You Know You Need Anchor If...

Right Technology

- ☐ You're not sure when or how to upgrade systems, software, or security. This is a sure sign of tech infrastructure without a roadmap.
- ☐ You are unsure if your cybersecurity measures are enough or up to date.
- ☐ You want to modernize your IT systems but don't know how.
- ☐ Your business is growing, and your current IT is lagging behind.

Right People

- ☐ You are putting the IT tech hat on an office manager or tech savvy employee.
- ☐ Your IT resource isn't regularly educating your organization on cybersecurity vigilance.
- ☐ You're doubting the skills of your existing IT resource or vendor.
- ☐ Your IT resource talks down to your employees with "geek speak."

Productivity

- ☐ You're stuck in break-fix mode with an "IT guy" who just fixes what breaks.
- ☐ Your organization is tolerating outages, downtime, or workarounds.
- ☐ You have disparate IT systems that don't work together seamlessly to provide efficiency.
- ☐ Your industry has strict compliance needs such as documentation, reporting, or data handling guidelines to meet regulations.

Business Growth

- ☐ Your IT resource knows tech, but doesn't know how your business runs.
- ☐ You can't quantify the dollar value your IT resource brings your business.
- ☐ You have unpredictable IT costs with little budget control.
- ☐ You don't feel like you're getting the ROI from the tech investments you've made.

When you know, you know.

Don't settle for reactive IT that disrupts productivity and stalls operations. Let us anchor your business in secure technology with support from a team that listens, communicates clearly, and cares about your success.
